

This program is a tool for editing the character string of SL4 (SC-SL4-AE/BE).

This program enables it to change the screen of SL4 to other languages other than English.

There are two kinds of methods, the case where a character string definition file is created newly, and when the existing character string definition file is edited.

The content of "Help" sentence cannot be changed by this program.

To create the new character string definition file:

- Choose the [File] menu and the [New] menu in the menu bar.
- Input all character strings. As for the item which has not been inputted, the English character string will be displayed.
- Select [Save] or [Save As..] menu, and save the character string definition file. The file name is fixed. Choose only the folder to save.

To edit the existing character string definition file:

- Choose the [File] menu and the [Open] menu in the menu bar.
  - There is a "Sample" folder in the folder where the program is installed. By selecting this "Sample" folder, it is possible to edit character strings written in English.
- Edit character strings to change.
- Select [Save] or [Save As..] menu, and save the character string definition file. The file name is fixed. Choose only the folder to save.

Note:

When you save the file, the message "Some character string data is not set. Do you really save it?" will be displayed. This is because the item is not assigned to the keyboard "Dialog Convert" is present. In this case, you don't have to worry about this message. Click the "OK" button to save the file.

- Copy the character string definition file "Sl4\_StrDefs.3tx" which was created or edited by this program to a USB memory.
- After inserting the USB memory in SL4 and select LANGUAGE SETTING in the MAINTENANCE MENU screen.
- Push [IMPORT LANGUAGE FILES from USB] button, and select the folder saved the character string definition file.
- Push [OTHER] Language button, and push [SET] button. SL4 will reboot and change the language.

\*\*\* About SL4-E Character Changer \*\*\*
